

第03回 古谷 賢朗

- 講演者: 古谷 賢朗氏 (東京理科大学)
- 題目: Eigenvalue theorem, Riemannian submersion and Lagrangian submanifolds satisfying Maslov quantization condition
- 日時: 2019年6月6日 (木) 16:30 ~ 17:30
- 場所: 数学科3号館3階1号室 (4号館3階)

[seminar, 2019](#)

abstract

Starting from Bohr model, Eigenvalue Theorem by A. Weinstein is a historical consequence guaranteeing the existence of quantum states based on the classical data, that is the existence of Lagrangian submanifold in the phase space satisfying Maslov quantization condition. We need to wait a rigorous proof until the development of the Fourier integral operator theory by Hörmander.

In this talk, I will remark that the result can be generalized to “sub-Laplacian” case and discuss the behaviour of Lagrangian submanifolds under Riemannian submersion which is not necessarily harmonic. Finally I will give an example of a Lagrangian submanifold satisfying Maslov quantization condition other than torus.
